

Objective-Setting

Copilot Agent

Demo Scenarios & Test Inputs

4 Role-Based Scenarios · Pre-Loaded Inputs · Expected Outputs

How to Use This Guide

This document gives you everything you need to run a compelling, polished demo of the Objective-Setting Copilot Agent in front of executives. Each scenario includes the exact inputs to paste or type into the agent, the expected output the agent should produce, and presenter tips to guide the conversation. Run the scenarios in any order — each one is self-contained.

STEP	WHAT TO DO
1 — Pick a scenario	Choose based on your audience. Start with Scenario 1 (Executive) if the room is mostly senior leaders. S
2 — Load the inputs	Type or paste the inputs from the INPUT block into the agent exactly as written. They are calibrated to p
3 — Let it run	The agent should produce a complete objective with all five components. Do not interrupt mid-generation
4 — Use the Workday text	Point out the Workday-Ready Text specifically. This is the money moment — it reads like the person wro
5 — Use the presenter tip	Each scenario has a suggested talking point to land the business value with your audience.

Scenarios at a Glance

#	SCENARIO	LEVEL	KEY DEMO MOMENT
01	Setting Business Priorities & Cascading Objectives	Executive	Shows top-down cascade from strategy to individual objectives
02	Improving a Weak Draft Objective	Individual Contributor	Live rewrite: shows the agent push back, explain why, and p
03	Cascading Team Objectives to Direct Reports	People Manager	Demonstrates role-aware journeys — manager gets a differ
04	Preparing for a Manager Conversation	Senior Leader / IC	Highlights the coaching value beyond objective writing — pre

01

Setting Business Priorities & Cascading to Individual Objectives

Persona: Sarah Chen — EVP, Personal Banking | Level Detected: EXECUTIVE

Scenario Overview

Sarah is an EVP setting her objectives for the year. She has two clear business priorities but hasn't yet translated them into team or individual objectives. This scenario shows the agent walking an executive through the full cascade — from strategic priority all the way down to a polished, Workday-ready individual objective.

Suggested Prompt to Start

Set my objectives

Inputs to Provide When the Agent Asks

Enter these responses in order as the agent asks questions during the conversation.

Your role	EVP, Personal Banking
Business Priority 1	Grow personal banking revenue by deepening existing client relationships — move clients from single-product to multi-product households
What success looks like by Q4	Increase multi-product household penetration from 38% to 45% across the personal banking portfolio by end of Q4
Business Priority 2	Build the talent and leadership pipeline required to execute our three-year strategy — succession health is too low
What success looks like by Q4 (Priority 2)	Improve succession health score from 51% to 60% across all VP and Director roles by Q4
Culture principles / HOW behaviours	Act with client empathy, lead with accountability, champion inclusion
Team objective to anchor individual objective	Drive multi-product penetration through relationship-led sales — grow from 38% to 45% by Q4

Expected Agent Output

The agent should produce the following five-component objective. Verify all five sections appear before moving to the Workday text.

STRATEGIC ALIGNMENT	This objective supports the Personal Banking team's commitment to deepening client relationships and growing multi-product penetration, which directly advances the enterprise priority of sustainable revenue growth.
WHAT	Drive multi-product household penetration from 38% to 45% across the personal banking portfolio by end of Q4, by embedding relationship-led sales conversations across the advisor network and holding leaders accountable for segment-level results.
HOW	By acting with client empathy in every stakeholder interaction — ensuring advisors are equipped and confident to lead needs-based conversations; leading with accountability by setting clear quarterly targets with direct reports and reviewing progress at each quarterly checkpoint; and championing inclusion by ensuring equitable access to relationship-led sales training across all markets.
SUCCESS MEASURES	(1) Multi-product household penetration reaches 45% by end of Q4. (2) Quarterly checkpoint reviews completed with each direct report against segment targets. (3) 100% of advisors complete relationship-led sales enablement by end of Q2.
QUALITY SCORE	4.7 / 5.0 — Strong outcome orientation, explicit cascade from business priority, and well-grounded HOW behaviours. Calibration-ready.

◆ WORKDAY-READY TEXT	By end of Q4, I will drive multi-product household penetration from 38% to 45% across the Personal Banking portfolio by embedding relationship-led sales conversations across the advisor network and holding my direct reports accountable for segment-level results at each quarterly checkpoint. I'll achieve this by acting with client empathy to ensure advisors are equipped and confident, setting clear accountability frameworks with my leadership team, and championing inclusive access to enablement so every market has the same opportunity to deliver.
-----------------------------	---

■ PRESENTER TIP	<i>After the agent finishes, say: 'Notice how it didn't just write an objective — it started with the business priority and built a direct line of sight all the way down. That's the cascade executives have been asking HR to solve for years. The agent does it in under three minutes.'</i>
------------------------	---

02

Improving a Weak Draft — From Task List to Business Outcome

Persona: Marcus Williams — Senior Financial Advisor, Personal Banking | Level Detected: IC

Scenario Overview

Marcus has already written a draft objective — but it reads like a to-do list, not a business outcome. This scenario demonstrates one of the agent's most powerful guardrails: it identifies the problem, explains it in plain language, and rewrites the objective into something Marcus would actually be proud to submit. This is the single best scenario to show executives the quality control built into the agent.

Suggested Prompt to Start

Improve a draft objective

Weak Draft to Paste In

Draft Objective (paste this when asked):

Complete all required training modules by Q2. Attend weekly team meetings and contribute to team discussions. Support manager with client calls and help with onboarding of new clients when needed. Work on improving my client satisfaction scores.

Additional Inputs to Provide

After the agent flags the draft as activity-based, provide these inputs to let it produce the improved version.

Your role	Senior Financial Advisor, Personal Banking — TD branch, Mississauga
Team objective	Increase multi-product household penetration from 38% to 45% across the personal banking portfolio by Q4
Key accountability	Manage a book of 180 personal banking clients — I own the relationship and am responsible for identifying financial planning opportunities
Target metric you already know	My personal client satisfaction score is currently 7.4 out of 10 — I want to get it to 8.5 by Q4
Culture principles	Act with client empathy, lead with accountability, champion inclusion
Career aspiration (optional)	Want to move into a team lead role — development is important to me

What the Agent Should Say First (Guardrail in Action)

Expected Agent Response to the Weak Draft:	"I can see what you're going for here, but this reads more like a task list than a business outcome. The difference matters: tasks describe what you'll do, but objectives need to describe what will be different in the business because you did them. Attending meetings and completing training won't help a calibration panel understand your contribution. Let me ask you a few questions so I can rewrite this into something you'd actually be proud to submit."
---	--

Expected Final Output After Rewrite

STRATEGIC ALIGNMENT	This objective supports the team's commitment to increasing multi-product penetration to 45% by Q4, advancing the Personal Banking enterprise priority of deepening client relationships.
WHAT	Grow my personal client satisfaction score from 7.4 to 8.5 out of 10, and convert at least 22 single-product clients within my 180-client book to multi-product households — both by end of Q4.
HOW	By acting with client empathy — leading proactive, needs-based financial planning conversations rather than waiting for clients to ask; holding myself accountable to a personal quarterly tracking discipline; and championing inclusive outreach so clients across all demographics in my book receive the same quality of relationship engagement.
SUCCESS MEASURES	(1) Client satisfaction score reaches 8.5/10 by end of Q4. (2) 22 single-product clients converted to multi-product by Q4. (3) Proactive outreach completed for 100% of book by end of Q2.
QUALITY SCORE	4.6 / 5.0 — Strong personal accountability, specific and verifiable metrics, well-grounded HOW. Calibration-ready.

◆ WORKDAY-READY TEXT	By end of Q4, I will grow my client satisfaction score from 7.4 to 8.5 and convert at least 22 single-product clients in my 180-client book to multi-product households — directly contributing to the team's goal of reaching 45% penetration. I'll do this by leading proactive, needs-based financial planning conversations, holding myself to a personal quarterly tracking discipline, and making sure every client in my book receives the same quality of relationship engagement regardless of their profile.
-----------------------------	--

■ PRESENTER TIP

Pause after the agent's guardrail response and say: 'This is what we mean when we say the agent coaches rather than fills forms. It identified the problem, explained it in plain language, and then asked the right questions to fix it. No HR team has the bandwidth to do this for every employee. The agent does it at scale.'

03

Cascading Team Objectives to Individual Direct Reports

Persona: Priya Sharma — Branch Manager, Personal Banking | Level Detected: MANAGER

Scenario Overview

Priya manages a branch team of 8. She has her team objective and needs to break it into individual objectives for two direct reports: a Financial Advisor and a Client Experience Specialist. This scenario shows how the agent handles the manager journey differently from an IC — it goes team-first, cascades intelligently, and produces two distinct objectives tailored to different roles within the same team.

Suggested Prompt to Start

Cascade team objectives

Inputs to Provide When the Agent Asks

Your role	Branch Manager, Personal Banking — Mississauga Square One branch
Team objective	Increase multi-product household penetration from 38% to 45% and improve branch NPS from 62 to 72 by end of Q4
Direct report 1 — name and role	James Okafor, Senior Financial Advisor
James's key accountabilities	Manages a book of 150 personal banking clients. Owns relationship-led sales and financial planning conversations. Responsible for product penetration within his book.
James's current projects	Completing CFP designation in Q2. Leading the branch's pilot of the new digital financial planning tool.
Direct report 2 — name and role	Aisha Tremblay, Client Experience Specialist
Aisha's key accountabilities	Owns the client onboarding journey from account open to first meaningful product conversation. Manages branch NPS and client feedback loop. Handles escalations.
Culture principles	Act with client empathy, lead with accountability, champion inclusion, bring your whole self

Expected Output — James Okafor (Financial Advisor)

STRATEGIC ALIGNMENT	Supports the branch team's commitment to growing multi-product penetration from 38% to 45% by Q4, which advances the Personal Banking enterprise priority of deepening client relationships.
WHAT	Convert at least 25 single-product clients within my 150-client book to multi-product households and achieve a personal product penetration rate of 48% by end of Q4, leveraging the new digital financial planning tool to lead deeper needs-based conversations.
HOW	By acting with client empathy — using the digital planning tool to make financial conversations more visual and client-driven from Q2 onwards; leading with accountability by tracking my book's penetration rate at each quarterly checkpoint and adjusting outreach plans accordingly; and bringing my whole self by drawing on the relationships and trust I've built to have candid, long-term planning conversations.
SUCCESS MEASURES	(1) Personal product penetration reaches 48% by Q4. (2) 25 single-product clients converted to multi-product by Q4. (3) Digital planning tool used in 80% of financial planning conversations by Q3.
QUALITY SCORE	4.8 / 5.0 — Calibration-ready. Specific to James's book and CFP context. Strong cascade from team objective.

◆ WORKDAY-READY TEXT	By end of Q4, I will convert at least 25 single-product clients in my 150-client book to multi-product households and bring my personal product penetration rate to 48%, contributing directly to the branch's goal of reaching 45% penetration. I'll do this by using the new digital financial planning tool to lead more visual, needs-driven conversations from Q2 onward, tracking my progress at each quarterly checkpoint, and drawing on the relationships I've already built to have the kind of candid, long-term planning conversations that actually make a difference for clients.
-----------------------------	---

Expected Output — Aisha Tremblay (Client Experience Specialist)

STRATEGIC ALIGNMENT	Supports the branch team's commitment to improving NPS from 62 to 72 and multi-product penetration, advancing the enterprise priority of deepening client relationships through exceptional experience.
WHAT	Improve branch NPS from 62 to 72 by Q4 by redesigning the client onboarding journey to create a natural first multi-product conversation within 30 days of account opening — reducing client drop-off after onboarding by 20%.
HOW	By acting with client empathy — designing the onboarding experience from the client's perspective, not the branch's process; leading with accountability by owning the NPS dashboard and presenting findings and action plans at each quarterly checkpoint; and championing inclusion by ensuring the new onboarding journey is accessible and welcoming for clients of all backgrounds and financial literacy levels.
SUCCESS MEASURES	(1) Branch NPS reaches 72 by Q4. (2) Post-onboarding drop-off rate reduced by 20% by Q3. (3) 70% of newly onboarded clients have a multi-product conversation within 30 days by Q3.

QUALITY SCORE	4.7 / 5.0 — Distinct from James's objective, clearly grounded in Aisha's specific accountability. Calibration-ready.
◆ WORKDAY-READY TEXT	By Q4, I will improve branch NPS from 62 to 72 by redesigning the client onboarding journey so every new client has a natural, low-pressure multi-product conversation within 30 days of account opening — reducing post-onboarding drop-off by 20% by Q3. I'll approach this by designing from the client's point of view rather than the branch's process, holding myself accountable to the NPS results at each quarterly checkpoint, and making sure the new experience is genuinely welcoming for clients of every background and financial literacy level.
■ PRESENTER TIP	<i>Highlight that the agent produced two completely different objectives from the same team goal — tailored to each person's role, accountability, and context. Say: 'A manager writing these manually would spend 2–3 hours. The agent did it in under five minutes, and both objectives are calibration-ready out of the box.'</i>

04

Preparing for a Manager Conversation on Objectives

Persona: David Park — VP, Retail Distribution | Level Detected: SENIOR LEADER

Scenario Overview

David is a VP with an upcoming objectives check-in with his SVP. He's already written his objectives but wants to walk in prepared — confident in his alignment story, ready to defend his targets, and clear on what he needs from the conversation. This scenario demonstrates the coaching value of the agent beyond objective creation: it helps people show up to performance conversations with clarity and confidence.

Suggested Prompt to Start

Prep for my manager conversation

Inputs to Provide When the Agent Asks

Your role	VP, Retail Distribution — responsible for 42 branches across the Greater Toronto Area
Your draft objective	Drive sustainable revenue growth across GTA branches by increasing average revenue per branch from \$2.1M to \$2.4M and reducing high-performer attrition from 18% to under 12% by end of Q4
Business priority this connects to	Enterprise priority: deepen client relationships and grow personal banking revenue sustainably
What you want from the manager conversation	I want alignment on the attrition target — 12% is aggressive and I need SVP support to unlock some retention investment. I also want to confirm the revenue target is the right one given Q1 results were below plan.
Q1 results so far	Revenue per branch is at \$2.05M — slightly behind the \$2.1M baseline, so the full-year stretch to \$2.4M feels tight. Attrition is at 16% — trending in the right direction but needs investment to accelerate.
Development focus	Looking to build my enterprise leadership presence — this is my first year as a VP and I want to be seen as ready for a business unit head role within 2 years

Expected Agent Output — Talking Points & Prep

The agent should produce structured preparation guidance across four areas:

TALKING POINT AREA	WHAT THE AGENT SHOULD PRODUCE
Your alignment story	Lead by connecting your objective to the enterprise priority: 'My two objectives directly advance the priority of the enterprise.'
Addressing the Q1 shortfall	Q1 revenue at \$2.05M, slightly below the \$2.1M baseline I set. I'd rather name that now than wait for it to come out.
The investment ask	'I need your support to unlock retention investment for the 12% attrition target. The business case is straightforward.'
Your development signal	'One thing I'd love your perspective on: I want to be showing enterprise leadership presence this year. As a leader, I want to be seen.'

Calibration Readiness Check the Agent Should Also Offer

Agent prompt to offer:	"Would you also like me to check whether your objective is strong enough for a calibration conversation? I can score it and flag anything a calibration panel might push back on before you walk into that room."
------------------------	---

■ PRESENTER TIP	<i>This scenario lands a different value proposition. Say: 'Every leader prepares for performance conversations differently — some with notes, some not at all. The agent gives everyone the same quality of preparation a great executive coach would give you, on demand, in the moment they need it. That's the inclusion story: it's not just about writing objectives, it's about giving every employee access to the same quality of support.'</i>
-----------------	--

Quick Reference — What to Watch For During the Demo

Use this checklist to verify the agent is behaving correctly during the live demo. If any of these don't appear, it is a signal to pause and check the agent instructions.

■ Level detection	Agent identifies the user's level from M365 profile or asks one targeted question. It does not ask for level repeatedly.
■ One question at a time	Agent never presents a list of fields. Each response ends with a single, focused question.
■ Dependency check	Agent asks whether team objectives are confirmed before writing individual objectives (Manager and IC journeys).
■ Guardrail on weak input	If a vague or task-based input is provided, the agent explains the problem before proceeding — it does not silently accept it.
■ All five components present	Every objective output includes: Strategic Alignment, WHAT, HOW, Success Measures, Quality Score.
■ Quality Score appears	Agent scores the objective and provides a brief rationale. Any dimension below 3.5 is flagged.
■ Workday-ready text is personal	The Workday text uses the user's actual role, team, project names, and metrics — not generic placeholders.
■ No half-year language	Agent uses Q1, Q2, Q3, Q4 exclusively. H1, H2, semi-annual do not appear.
■ Follow-up offer	After each objective, the agent offers to refine, cascade, check calibration readiness, or prep for a manager conversation.

Key Messages for Executives

■ Scale without sacrifice	Today, objective quality depends entirely on how good the manager is. The agent gives every employee — regardless of their manager's bandwidth or skill — access to the same quality of coaching and output.
■ Calibration starts at objective creation	The agent doesn't just write objectives — it writes objectives that will survive a calibration conversation. That reduces the rework HR sees every year when poorly-written objectives reach the calibration table.
■ Role-aware, not one-size-fits-all	An executive gets a completely different experience than an individual contributor. The agent knows the difference and adapts automatically. No configuration required by the employee.

■ **Workday-ready in minutes**

The final output is not a draft to be polished. It's copy-paste ready — written in the employee's voice, personalized to their role and context, and formatted for direct system entry.

■ **Coaching beyond objectives**

Scenario 4 shows this clearly: the agent's value extends to manager conversations, calibration prep, and development planning. It is a year-round performance coach, not an annual objective-writing tool.

CONFIDENTIAL — PREPARED FOR EXECUTIVE PRESENTATION | DO NOT DISTRIBUTE
